1956 Corvette: Production Information: Mandatory Option 469 Dual Four Barrel Carburetor Equipment

Subject: Mandatory Option Changes
Model and Year: 1956 Corvette
Source: Milwaukee Zone Letter
Date: April 11, 1956

TO: ALL CHEVROLET DEALERS

This is to advise that effective immediately the Corvette can now be ordered without the mandatory option 469, Dual 4 Barrel Carburetor equipment. The regular Corvette engine without this equipment has a single 4 barrel carburetor and is rated at 210 HP.

In the near future I feel that you will be able to order a Corvette as you desire, using none of the mandatory options that are now listed.

Very truly yours,

W.R. McClean

Zone Car Distributor
