

# 1955 Corvette: Service Bulletin: New Gasoline Gauge

**Subject:** New Gasoline Gauge Dash Unit

**Model and Year:** 1955 Passenger Cars

**Source:** Chevrolet Service Bulletin

**Bulletin No:** DR-195

**Section:** XII

**Date:** February 8, 1955

## To: All Chevrolet Dealers:

In cases where the Gasoline Gauge in the instrument cluster reads 3/4 full when the tank is completely full it may be the result of a change in calibration of the gauge due to a feed back through the ignition switch.

A new Gauge which is unaffected by the above condition went into production about 1-14-55, and is now available in Parts Stock.

## PARTS DATA

Description: Gas Gauge Dash Unit

New Part No: 1518407

Old Part No: 1518152

All of the early type gauges in Parts Stock are being returned to the source for correction.

As a means of identification, both coils on the early gauge are red. The Left Hand Coil on the new gauge is green.

E.L. Harrig

## Manager, Service and Mechanical Department

General Motors bulletins are intended for use by professional technicians, not a "do-it-yourselfer". They are written to inform those technicians of conditions that may occur on some vehicles, or to provide information that could assist in the proper service of a vehicle. Properly trained technicians have the equipment, tools, safety instructions and know-how to do a job properly and safely. If a condition is described, do not assume that the bulletin applies to your vehicle, or that your vehicle will have that condition. See a General Motors dealer servicing your brand of General Motors vehicle for information on whether your vehicle may benefit from the information.
