

# 1957 Corvette: Field Service Bulletin: Throttle Return Spring Kit

**Subject:** Throttle Return Spring Kit

**Model and Year:** 1957 Chevrolet Corvette Fuel Injection 7014360

**Source:** Rochester Products Field Service Bulletin

**Bulletin Number:** B-F1-10

**Date:** 3/6/57

APPLICATION: CHEVROLET CORVETTE FUEL INJECTION 7014360

SUBJECT: THROTTLE RETURN SPRING KIT

The throttle return spring was formerly attached to the air meter and the bell crank; to provide a better action, it is now attached between the throttle lever and bell crank stud. For conversion of earlier units, kit No. 7014754 contains a new longer bell crank stud, a new throttle return spring, and a spring retainer to attach to the early throttle lever. Since this is a design improvement only and does not affect performance, use of the kit is recommended only when it is necessary to replace the throttle return spring.
